Influenza (formerly called Novel Influenza A) Information

The typical influenza season runs from October through April of the following year.

Influenza surveillance varied throughout 2009 in response to the H1N1 pandemic:

Prior to September, IDPH tracked activity in schools, hospitals, laboratories, and outpatient health care provider settings.

After September 1, IDPH required reporting of all 2009 H1N1 hospitalizations and deaths. Influenza activity is tracked year-round, but reporting for each New Year starts September 1st.

Since September 1, 2009 through 2010 YTD:

- There have been 659 confirmed and probable hospitalizations due to 2009 H1N1.
- There were 40 deaths also attributed to 2009 H1N1.

One 2009 H1N1 death occurred in 2009 but before September 1, 2009.

For more flu information visit: www.idph.state.ia.us/IdphArchive/Archive.aspx?channel=FluReports
