West Nile Virus Surveillance Report

Center for Acute Disease Epidemiology | Acute Disease Prevention and Emergency Response | West Nile Virus Website

Date Issued: August 5, 2013

Overview:

Three human cases of West Nile Virus have been reported in Iowa in 2013. Three positive blood donors have been reported so far this year. Three sentinel chickens have tested positive for West Nile Virus in Pottawattamie and Woodbury County. One mosquito pool has also tested positive for West Nile Virus in Story County. No horses have tested positive for this virus. In 2012, there were 31 human cases of West Nile Virus reported.

Human / Sentinel Chicken / Mosquito Surveillance, 2013 Positive Samples

				Mosquito Pools	
County	**Human**	**Blood Donor**	**Sentinel Chickens**	***Culex pipiens* Complex**	***Culex tarsalis***
Kossuth	1	0	N/A	N/A	N/A
Linn	1	0	N/A	N/A	N/A
Pottawattamie	0	0	1	0	0
Shelby	1	3	N/A	N/A	N/A
Story	0	0	0	1	0
Woodbury	0	0	2	0	0
Total	***3***	***3***	***3***	***1***	***0***

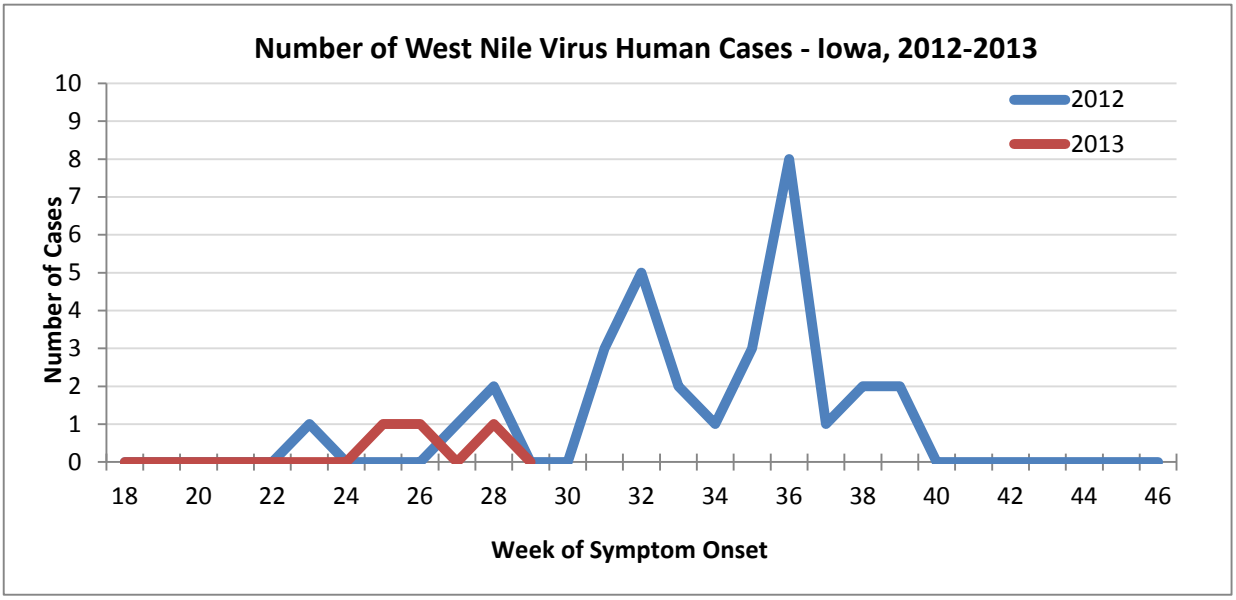

Figure 1. Number of West Nile Virus Human Cases – Iowa, 2012-2013

West Nile Virus is endemic in Iowa and activity usually peaks in late summer and early fall. Local partners collect mosquitoes and maintain sentinel chicken flocks across the state. Iowa State University Medical Entomology monitors the levels of *Culex pipiens* and *Culex tarsalis* mosquitoes (the primary vectors of WNV) statewide and the State Hygienic Laboratory (SHL) tests the mosquitoes to determine whether they are infected with West Nile Virus or other arboviruses. SHL also tests the blood drawn from sentinel chickens weekly to determine whether they have been infected with West Nile virus or other arboviruses.

For additional on Iowa West Nile Virus activity, visit:
www.idph.state.ia.us/Cade/DiseaseIndex.aspx?disease=West Nile Virus.

National WNV Activity:

Nationally, as of July 30th, 283 counties in 35 states and the District of Columbia have reported WNV activity for 2013, including 19 states with reported WNV infections (i.e., disease cases or viremic blood donors) and 16 additional states with reported WNV activity in non-human species only (i.e., veterinary cases, mosquito pools, dead birds, or sentinel animals.

To date, a total of 53 human cases of WNV disease have been reported from 19 states. States with human infections includes Alabama, Arizona, California, Colorado, Georgia, Iowa, Louisiana, Minnesota, Mississippi, Nebraska, Nevada, New Mexico, South Dakota, Tennessee, Texas, Washington and Wisconsin

West Nile Virus Activity by State – United States
