

# Basic User View

The screenshot displays the IDPH Data Warehouse website interface. At the top, the browser address bar shows "Home - Data Warehouse". The website header includes the IDPH logo and the text "Data Warehouse". A navigation menu contains "Data Warehouse", "Change Password", "Help Viewer", and "Site Actions". A sidebar on the left lists various categories: Home, Births (Overall, Mother Characteristics, Infant Characteristics, Health Care Topic), BRFSS, County Health Snapshots, Deaths (Overall, Leading Causes, Infant Mortality), Inpatient Discharge (Diagnoses), and VPN (VPN Installation), along with a "Recycle Bin" icon.

The main content area features a "Help Desk" section with contact information: "(515) 281-7221 or [dwhelp@idph.state.ia.us](mailto:dwhelp@idph.state.ia.us)". Below this is the "IDPH Data Warehouse Metadata" section, which includes a navigation pane on the left with a tree view showing "Overview", "Subject Areas" (Behavioral Risk Factor Surveillance, Births, Deaths, Inpatient Discharges), "County Health Snapshot", and "Glossary". The main content area displays the "IDPH Data Warehouse Metadata" title and an "Overview" section with the following text:

**Overview**

**Purpose**

The purpose of this site is to describe the contents of the [Iowa Department of Public Health Data Warehouse](#). The Data Warehouse contains data from a variety of sources which is organized for the purposes of supporting analysis and reporting.

The IDPH Data Warehouse Metadata site is intended as a primary resource for supporting analytical activities by providing metadata (information about the data). Examples of metadata include definition of terms, limitations of the data, reporting suppression criteria and additional help resources.

The browser's status bar at the bottom shows "Done", "Internet", and "110%" zoom level.

## IDPH Data Warehouse Metadata

### Behavioral Risk Factor Surveillance

#### Overview

The objectives of the Behavioral Risk Factor Surveillance System (BRFSS) are:

1. To determine the state specific prevalence of personal health behaviors related to the leading causes of premature death.
2. To develop the capacity of state health departments to conduct credible telephone surveys.
3. To advance the understanding that certain health-related behaviors are critical indicators of health.

The Centers for Disease Control and Prevention helped develop the Behavioral Risk Factor Surveillance System to help states assess health risks and monitor trends. Comparable surveillance methods are used in all states. This allows for comparisons among states and for the assessment of geographic patterns of risk factor prevalence.

The BRFSS information is used to design, implement, and support public health activities. These activities are designed to reduce the premature death and disability of Iowa residents. State public health departments are responsible for planning, implementing, and evaluating disease prevention programs. Many of these programs involve health risk behavior modification. Examples of health risk behavior modification programs in Iowa are the Clean Indoor Air Act, health baby campaigns,
