PARENTAL REFUSAL OF NEWBORN HEARING SCREENING

Dear Parent:

Congratulations on the birth of your baby! You have indicated an objection to the hospital conducting a hearing screening test on your baby. We want you to understand some facts prior to signing this refusal form.

First, the hearing screening test would not hurt your baby. Most babies sleep through the test.

Second, hearing loss is the most commonly occurring disability in infants. Hearing loss occurs in approximately three babies out of every 1,000 born in the United States.

Third, if your baby does have a hearing loss, it is important to know about it as soon as possible. Adequate hearing is important for your child to learn normal speech, language, and other developmental skills. A delay in identifying hearing loss leads to delays in a child’s ability to talk and communicate. Early detection of hearing loss and early intervention and treatment before six months of age has been demonstrated to be highly effective in facilitating a child’s language and communication development.

Finally, you should not rely on your own ability to determine whether your baby has hearing loss. Reliance on parental recognition to detect hearing loss has not been successful, as over 50% of newborns and infants with hearing loss go undetected until the age of two and a half. Your refusal to allow your baby to be screened for hearing loss could have significant consequences for your baby’s future development.
